

Aerospace Distributor
Northern California

Strict FAA requirements handled with Doc2NET

Sharp hardware helps provide reliable records management

Client Situation

With the Federal Aviation Administration, there's no way to just "wing it" when it comes to paperwork. So when a worldwide distributor of commercial and military-specification aerospace supplies needed to comply with FAA rules, they turned to Doc2NET.

The company was founded in 1961 and is located in Northern California. With offices and stocking facilities near major airframe assembly plants, this organization supports many programs, including Just-In-Time (JIT), with industry leading service. The need to comply with stringent FAA requirements to maintain documentation about the parts they manufactured called for a reliable information management system. They needed a solution that would be able to store their documents easily with secure access and give them painless access to their documents. The need for a simple electronic system with higher capabilities had arrived.

'Doc2NET provided a quick to deploy solution and coupled with Sharp's hardware a reliable printing and copying solution.'

The FAA had issued stringent requirements when it came to maintaining records about the sourcing, fabrication and delivery of aerospace parts being manufactured. The challenge being to safely store this required documentation with the ability to quickly retrieve the documents at the request of government regulators. Records were being manually retrieved and stored in traditional file cabinets – a process that became time-consuming, costly and inefficient. The existing procedures were also unsecure, with no disaster recovery safeguards to protect vital information loss.

Doc2NET Solution

The chosen solution was the Doc2NET electronic filing system with advanced PDF and an advanced OCR seat, along with two Sharp AR-M450N imagers

with the AR-NS2 option. Doc2NET provided a quick-to-deploy solution, and coupled with Sharp's hardware, a reliable printing and copying solution. By investing in a combined Doc2NET Sharp system, this organization is now able to store the documentation required for each part manufactured.

Client Benefit

Adopting electronic document storage will speed document retrieval time and free up office space currently devoted to 20 large filing cabinets. The Doc2NET Sharp solution provided FAA compliance for their documents with safe and secure electronic storage. They now have the ability to retrieve documentation instantaneously from each Doc2NET user's workstation. The successful implementation will now drive additional equipment purchases.
